

Instructions: Practice (0 pts)

You are building an ugly web page for your web site development class. You are given the following files:

- An `index.html` file. **This cannot be modified.**
- A `practice.css` CSS file. You will be adding your styling to this file.
- A `practice.js` JavaScript file. You will be adding your code to this file

Prior to your work the HTML page will look like:

Practice and Configuration

Getting Prepared for the CS351 Spring 2021 Midterm

NetId: Put Your NetId here with code

We need to set up our **repos** for our *midterm*! In the exam you are allowed to modify some files but not others. You must pay attention to the directions!

What About JavaScript

JavaScript is very **important** and will be on the exam. Make sure your local repo and corresponding GitHub repo are all on the same branch and ready to **go**!

This is a **time limited** exam, hence you don't want to waste any time on *git* or *GitHub*.

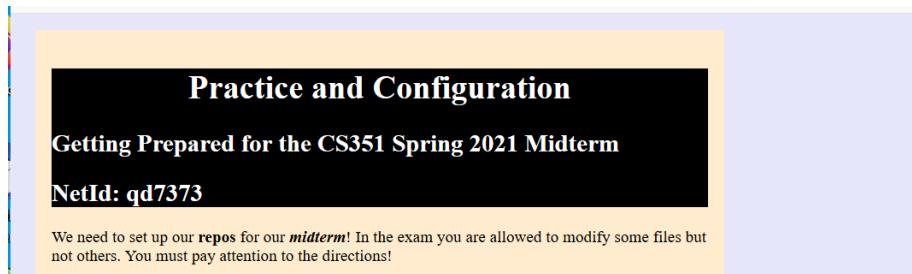

What About HTML

HTML is at the heart of everything we do. So you can't forget your HTML. On the exam you may spend more time reading my HTML5 rather than writing much yourself.

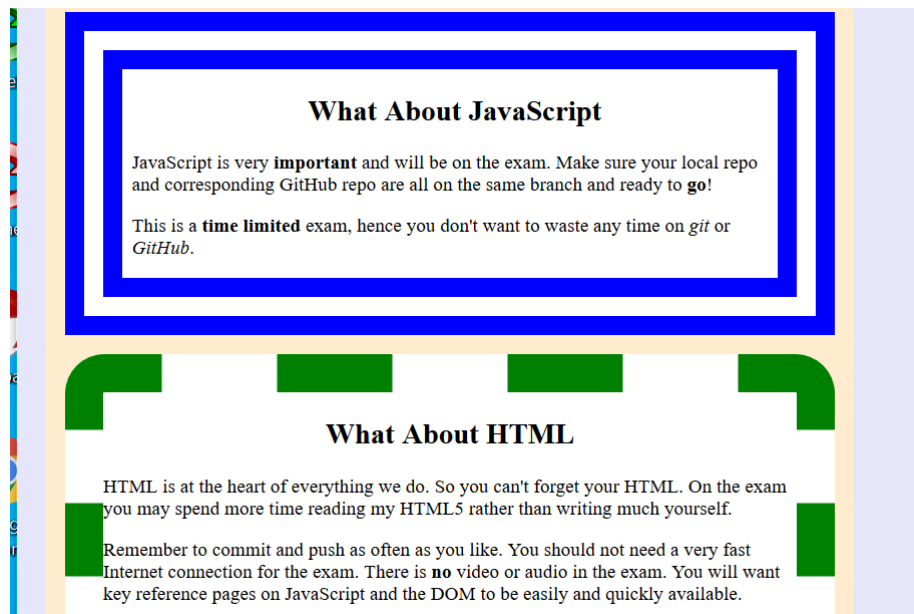

Remember to commit and push as often as you like. You should not need a very fast Internet connection for the exam. There is **no** video or audio in the exam. You will want key reference pages on JavaScript and the DOM to be easily and quickly available.

Commits after the two hour time limit will **not** be considered. Push and commit often. Your code **must** work to receive credit.

Afterwards it will look like this:

and this:

(a) Update NetId with JavaScript (0 pts)

Using JavaScript in the `practice.js` file insert your NetId information in to the `` in the last `<h2>` element in the `<header>`.

(b) Set some colors(0 pts)

Set overall background color to *lavender*, set main background color to “*blanchedalmond*”. Set other colors on the elements and the text to approximately match my ugly mess.

(c) Set some widths and spacing (0 pts)

Set the CSS so as to limit the content to no wider than 40 “normal” characters.

(d) Set some borders (0 pts)

Approximately match my borders.

(e) Align some headings (0 pts)

I centered some headings. You can too!
